

# **A SAFE STRATEGY FOR DIFFERS MARKET**

**By MKOREAN WVN**

## What to consider

1. Predict a digit with a percentage less than 10%
2. Avoid predicting a digit with a green bar or red bar.
3. Make sure the predicted digit does not increase nor decrease each time.

## **ENTRY POINT FOR MANUAL**

- Wait for the cursor to hit the predicted digit and make sure the predicted digit does not increase since it will be a MATCH resulting in a loss.
- Kindly take your time to avoid loss.
- 
- Don't overstay in the market since Deriv will track your strategy and you start encountering loss.

## **ENTRY POINT USING A BOT**

- Use a speed bot to enhance accuracy with market.
- A lagging bot can result in losses.
- Wait for cursor to hit predicted digit and it increases to avoid cursor hitting back....After the predicted digit increases run your bot for only 2 to 4 runs and stop the bot and change to another volatility to avoid tracking from Deriv.
